

Algorithm Properties

Algorithm properties dialog box serves for defining the properties of algorithms being created: a combination of flags, the size of the question as well as the set of services for algorithms.

The screenshot shows a dialog box titled "New Field" field properties with a subtitle "Data size (DEC): 92 bytes". The "Algorithm determinant" tab is active. The dialog contains several sections of controls:

- Algorithm or Protected Item properties:** A sub-tab labeled "Algorithm determinant".
- Flags:** Depends on ID, With counter decrease, and Set inactive status.
- Question size (DEC):** A text input field containing the value "8".
- Counter value (DEC):** A text input field containing the value "0".
- Available services:** A list of services with checkboxes: Activation, Deactivation, Data read, Password-protected reading, and Data update.
- Passwords:** Two text input fields, both containing the value "0".
- Random or unified:** Two dropdown menus, both set to "Unified".
- Password entry attempts (DEC):** A text input field containing the value "10".

At the bottom of the dialog are four buttons: "OK", "Cancel", "Apply", and "Help".
