Protection

Download and install Guardant SLK to get started with protection tools

Download Guardant SLK

The following tools are used to link executable files of a software product to a license:

Guardant Protection Studio

A utility for binding executable files to a license (components created on Guardant Station), as well as to protect the program code from reverse engineering.

Used for files written in C, C ++, C #, Delphi, etc.

Guardant Licensing API

A set of methods designed to be embedded in the source code of executable files.
