

Installation of Guardant Control Center

To write a license to a dongle, the Guardant Control Center service is required. It must be running on the same computer where the key is inserted.

Download Guardant Control Center for:

Windows Linux RPM (x86) Linux RPM (x64) Linux DEB (x86) Linux DEB (x64) Linux TAR

After installation, the Guardant Control Center service starts automatically, and a WEB interface becomes available at **[http://localhost: 3189](http://localhost:3189)**, which allows you to monitor installed Guardant software and hardware keys, as well as receive diagnostic information on them.

Guardant Control Center also acts as a license server for network keys.

To access the "default" settings, use the password: **admin**.
